Batuhan Özkan

Project Manager - FrontEnd Developer

About me

Throughout my career journey, I have consistently focused on self-improvement. My journey began in the Computer Science department of a Vocational High School, and I took my first steps in my career during my third year of high school. Since 2018, my greatest motivation has been to continuously develop myself while doing what I love. Over the course of more than 6 years, I have had the opportunity to work in various agencies, which has allowed me to gain experience not only in the field of software development but also in various other areas, thanks to my curious personality.

By using WordPress, I have advanced in the field of web development, completing over 40 web projects. In my web work, I have utilized tools like Elementor and WooCommerce, as well as HTML To WordPress. Throughout this process, I have gained experience in UI/UX, honed my design skills, and learned to solve problems quickly. I have also gained valuable experience and carried out work in areas such as graphic design, Google and social media advertising processes/strategies, and social media management.

Looking ahead, I aim to further enhance my team and client communication skills through the experiences I will gain. I will continue to develop myself through further education and take my passion for this work to new heights.
